### Order form for making an earmold

Dear hearing aid acoustician,

To make an in-ear system I need an ear impression. It is important that this is carried out at least to the second bend and that the concha is imaged as completely as possible and has no air inclusions.

The customer should make chewing movements when introducing the impression material.

Do not cut or grind the ear shapes. Please let us know if you noticed special features during the impression taking.

We thank you for your cooperation!
